What is FIXALT?

FIXALT is an easy asphalt and concrete smooth repair product. You can quickly stabilize your potholes with FIXALT. The repair is strong, long lasting, stops further effects of weather, freeze and ice as well as looks good. Damaged patches can easily be repaired inexpensively using this product.

Applications

- Asphalt road patching
- Concrete road repairs
- Pothole repairs
- Driveways, walkways and parking lots
- Utility cuts and manhole repairs
- Bridge joints

How To Fix A Pothole?

1 Preparation

You will need some tools such as broom, hand tamper and FIXALT.

2 Clean Pothole

Use a broom to clean and sweep pothole removing all loose debris.

3 Tamp down access material

Use the tamper to compact any loose base. This will ensure that the FIXALT sits on a solid base.

4 Tamp down access material

Use the tamper to compact any loose base. This will ensure that the FIXALT sits on a solid base.

5 Tamp down

Use the tamper to press down and compress the FIXALT. You may want to use your foot to help.

6 Best compaction

Use a truck or heavy vehicle if available and drive over the repaired area. This will help to fully compact the repair for longevity.

7 Re-tamp

Again use the tamper to re-tamp the repair and to smooth out any tire tracks that may still be present.
